INCLINE CONVEYOR

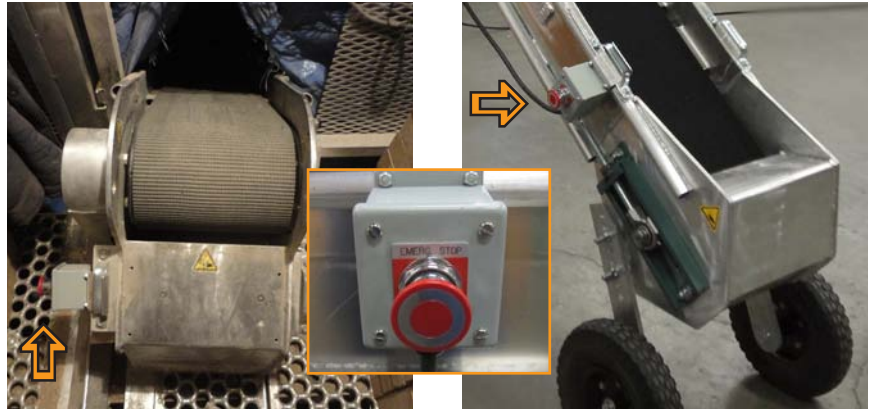

All-aluminum, modular conveyor system designed to easily transport brick from kiln floor to bricking machine work platform

FEATURES AND BENEFITS

The electric motor is a 1 HP (746 kw) and comes standard with 2 emergency shut off switches located at each end of the conveyor

The Incline Conveyor can be mounted at the up or down kiln end of the bricking machine.

Can be designed for any size bricking machine from 3.5M up to 7M kiln shell ID.

The Incline Conveyor comes in 3 sections.

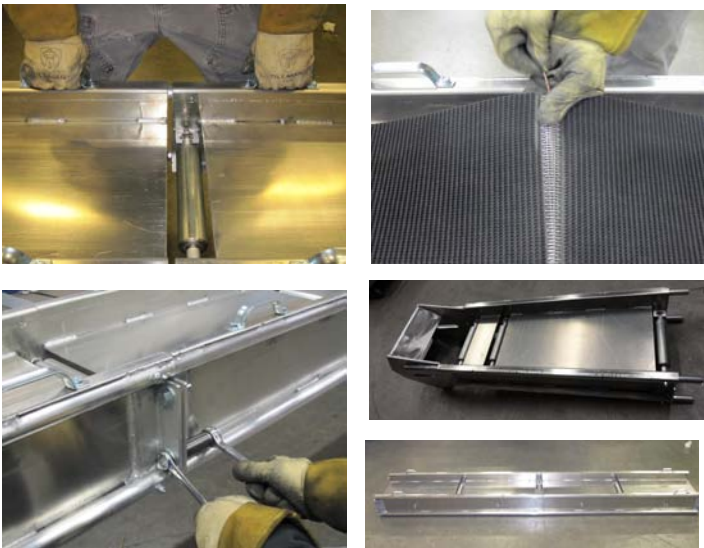

Drive section houses the drive drum and electric motor

Center section which 75% of the overall length of the incline system.

The wheels on the base end adjust to the slope of the kiln keeping the conveyor even.

Made out of lightweight T6-6061 aluminum for easy assembly and portability

Modular design, the Incline Conveyor is easily assembled

The Incline Conveyor drive end mounts slightly right of the center of the bricking machine platform with guide pegs that slip through the decking of the work platform.
